Join us for the IRES Information Session:
Thursday, November 1 at 3:30PM in Shaffer 101

INBT offers undergraduate and graduate students advanced research training in a multicultural setting in the IRES program. IRES fellows perform research on mutual interest bioengineering projects at imec in Leuven, Belgium. Students will learn how to design, fabricate, and test a wide range of biomedical devices. The internships last 10 weeks in the summer and include travel expenses, accommodation, and a stipend. The program is funded by the National Science Foundation.
